

A RISING OF DEATH'S TIDE.

AN EAST INDIAN TRAGEDY.

The Trial of the Prince of Oudeopoor for Killing His Wife.

From the "Daily Mail."

The Provinces of the Increase of Mortality in This City and Some Indications as to the Various Causes. New Estimates of Life.

More than usual have been dying in this city last winter and this spring. Those who live and the subjects do not agree on what causes. No one has been sufficiently bold to suggest the increase in the general mortality. Reports furnished by Dr. John T. Perkins, Surgeon-Doctor of Vital Records, show again Jan. 1, the average number of deaths per week was 712, or 180 more than for the previous week of 1880. Last week the number was 727, which with one exception, was larger than any week since last summer. It 727 persons die every week for a year, it would amount to 37,940 deaths. The entire number in 1880 was only 31,866, and the rate of mortality in that year was higher than for several years.

The disease which ranks highest as a destroyer is consumption. Its victims last week numbered 122. The number for the previous week was 118, an increase on this account of deaths from consumption for the corresponding weeks of the last five years of about 25, spending weeks of the last five years of about 25. The reported deaths from all causes in the reported weeks of 1880 amounted to those 157,318, while in 1880 the number was 146,000. In 1880 there were 20,000 more deaths from consumption than in 1880. This disease is very destructive elsewhere, as shown by the United States census taken last year, especially in the Eastern States. In Maine it was the cause of over one-quarter of the mortality. The exact percentage given is 25.7. In New Hampshire the percentage on the total mortality was a little over 22; in the District of Columbia it was nearly 22; in Vermont it was over 20; in Rhode Island it was a trifle less; in Massachusetts it was nearly 22; in Oregon it was 18; and in Connecticut it was nearly 18. The percentage of consumption deaths from all causes was lowest in Arizona, 8.81 per cent.; in Nevada it was 14.9, and in Georgia, 14.6. New York State stands fourth on the list in regard to the number of consumption deaths.

Pneumonia caused the deaths last week. This disease increased 25 over the average number of the last five years.

The death rates from pneumonia were 30,

an increase of 8 over the average of the corresponding weeks of the last five years.

Deaths from "croup" increased 9 over the average referred to. There were 14 deaths from croup, and even an increase of 10 over the average was 14.

There were 14 fatal cases of malaria, even an increase of 11.

In the week ending March 3 there were 75 deaths from diseases of the heart, brain, and blood vessels, 24 over the average. The increase of death from "diseases of the heart" was 44 cases, even.

The number of deaths in the week ending March 3, over the average made up as follows:

Deaths from consumption 122.

Deaths from pneumonia 30.

Deaths from croup 14.

Deaths from malaria 14.

Deaths from heart diseases 75.

Deaths from brain diseases 24.

Deaths from blood vessels 24.

Deaths from diseases of the lungs 30.

Deaths from diseases of the heart 44.

Deaths from diseases of the brain 24.
